

TankPro is suitable for all farm water storage tanks. It maintains & cleans water , sterilizes (chlorinates water) in the tank allowing the water to be consumed by animal livestock. Clean sterile water should always be used to clean out livestock areas, pens and cages.

Disinfection is also necessary in order to provide safe drinking water, providing many beneficial agricultural applications, such as livestock watering. Chlorinating water is one of the best disinfecting processes because it is possible to maintain and measure a residual level of chlorine in the distributed water. This allows for continual monitoring of the process and minimizes the potential for re-growth of pathogenic organisms throughout the distribution pipes.

TankPro is suitable for farms that have animal livestock including Dairy Cattle, Chickens, Pigs, Dairy farms. Improved health of the Animal Livestock On chicken farms, for example, allows considerable reduction in "seconds eggs" saving thousands of dollars providing a higher yielding of good eggs with far fewer vet visits & bills.
