# 1333L -Fat

The 1333 Litre FatTank is great for those places where the Slimline tanks are too long. These may fit perfectly between windows or between trees in the backyard!

Length 1012mm

Width 750mm

Height 1950mm

Weight 95kg

Choose from 12 different colours Colorbond colours

## DISCLAIMER

Actual colours may vary. We try extremely hard to ensure our photos are as life-like as possible, but please understand the actual colour may vary slightly from your monitor. We cannot guarantee that the colour you see accurately portrays the true colour of the product.

## Thinpots Vertical Garden:

## Suitable Brackets

WB01-A - Wall Bracket	
BS201 - Floor Bracket	
BSD201 - Joiner Bracket	

\*Brackets - additional cost apply

## Fittings (Inclusion)

1 x 300mm Inlet Straine	
1 x 90mm Overflow fittin	
2 x 25mm Brass Outlet	
1 x 25mm Ball Valve	

## 1333L Vertical Garden Set-up

No. of Pots	5
Pots per Row	2
Total No. of Pots	10
Total No. of Connectors	10

# 1333L Thintank

MODEL/SIZE	TT1333
Capacity	1,333 Litres (352 gallons)
Material	Polyethylene (LDPE)
Material Grade	Food Grade, UV Stabilised
Length	1012mm
Width	750mm
Height	1950mm
Weight	95kg (empty)
Shape	Modular
No. of Inlets	1 x 300mm (middle)
Fittings inclusion	Ball valve, inlet strainer, overflow flange
No. of plugs	24

## Product Specifications

Due to the variable shrinkage rate of polyethylene, the product dimensions and capacities listed here are approximate. Naturally occurring pigment variations in raw materials may also cause some variability in colour shades. While we are trying to come as close to the advertised shades as possible, we are unable to guarantee exact tank colour matches. Due to ongoing improvement and innovation, product details, design and specifications are subject to change without notice.

## Product Suitability

The product recommendations used in this brochure are intended only as a guide. While we make every effort to accurately represent the suitability of our products for a variety of uses, every situation may be unique and require additional investigation when necessary. Thintanks holds the right to change equipment and product accessories in line with ongoing developments and product supply.

# 1333L Installation

## THINTANK INSTALLATION

It is important for tanks to be installed on a SOLID AND COMPLETELY LEVEL SURFACE. Brackets are recommended to ensure tank(s) cannot be accidentally pulled over by human effort.

### 1333L - Against the wall

(1012mm x 750mm x 1950mm)

- On an existing pavement, sloping away from the wall, the surface must be built up to ensure the tank face is vertical and the back of the tank is flush against the wall.
- Position the tank on the prepared base and fix it to the wall using bracket WB01 -A on each end.
- Place brackets approximately 1400mm above the base. Wall brackets need to be fixed to a wall using Dyna Bolts on both ends of the brackets.

\*Brackets are recommended to ensure the tank cannot be accidentally pulled over.

### 1333L - Freestanding

(1012mm x 750mm x 1950mm)

- Form and pour a 100mm thick concrete slab, 1000mm wide with 100-150mm overlap each ends.
- Use F82 fabric placed centrally 75mm above the prepared surface.
- Use a carpenter's level to make sure the concrete surface is level across the width.
- Secure the tank to the concrete using brackets BS201 - one at each end.

### Multiple Tanks - Freestanding

Continue the following steps when installing multiple tanks

\* With multiple tanks use bracket **BSD201** and Tank to Tank connection kit between tanks

- Attach blue line coupling to each tank. Insert blue line to installed tank and wrench tighten to secure.
- Place the joiner bracket (BSD201) on the other end of the first tank and secure it to the ground using Dyna bolts.
- Slide the second tank into position easing the pipe into the second tank coupling.
- Once fully seated, the tanks will sit almost flush and the fitting can be wrench-tightened to secure.
- Install the BS201 (end bracket) on the other end of the second tank and finish the installation.

\*Brackets are recommended to ensure the tank cannot be accidentally pulled over.

## Multiple tanks connection fittings

2 tanks connected with tank to tank connection kit

**IMPORTANT:**  
Thread tape should be used on all couplings and ball valves.

## Brackets

BS201

BSD201

## Fittings

- Drill out whichever end is required to put the ball valve

- Install the downpipe into the inlet pre-fitted with leaf strainer.

- Install overflow pipework and plumb away from tank base or into storm water

- install bucket height tap(if required)

Note: For multiple tanks, inlet and overflow must still be connected to the same tank.

**WARRANTY** Thin Tanks warrants its tanks by a pro-rata warranty for 10 years from the original date of purchase. This warranty covers the original purchaser only and is not transferable. Thin Tanks will repair or replace, at their discretion the tank affected by a defect caused by the manufacturing process or materials. Fading or colour change, damage caused by accidents or misuse, do-it yourself repairs or incorrect installation, and any subsequent costs (including freight of replacement tank) are not covered by warranty.

ThinPots are specially designed to hang on the front of your ThinTank to create a unique Vertical Garden System. The ThinPots clip directly onto an irrigation pipe, which gives an option to be watered direct from the tank or just simply hand water; each ThinPot features handy drainage holes. The options are endless when it comes to turning your tank into a garden! The Thinpots New Series fits in all Thintanks NEW SERIES tanks, including our Fat Series. (1000L-S2, 2000L-S2, 3000L, 4000L, 5000L, 1333L Fat & 2000L Fat).

Length: 230mm

Height: 200mm

Width: 90mm

MODEL/SIZE	Max. NO. OF ROWS	Max. NO. OF POTS per ROW	TOTAL NO. OF POTS
500L	3	4	12
1333L	5	2	10
1000L-S2	5	8	40
2000L-S2	5	8	40
2000L Fat	5	4	20
3000L-S2	5	10	50
4000L	5	10	50
5000L	6	12	72

4 Different Colours to choose from:

**DISCLAIMER**  
Actual colours may vary. We try extremely hard to ensure our photos are as life-like as possible, but please understand the actual colour may vary slightly from your monitor and everyone can see these colours differently. We cannot guarantee that the colour you see accurately portrays the true colour of the product.

# THINPOTS INSTALLATION GUIDE

## SERIES 2 -NEW DESIGN

**This Thinpot Vertical Garden System has been specifically designed to suit the 1333L, 2000L, 2000L Fat, 3000L and the 4000L Thintanks**

### 1. REPLACE THE WALL PLUGS

The Thinpots are hung on the face of the tank by removing the existing wall plugs and inserting the Thinpot adaptor plugs parallel to the horizontal channels in the tank by using a rubber mallet.

### 2. CLIP THE POLY PIPE

Then clip 13mm black poly pipe onto the adaptor plugs. The poly pipe should be cut off 20mm past the last adaptor hook each end.

### 3. STOP END, BARB ELBOW, BARBE TEE & RATCHET CLAMP

For a single row of pots a stop end should be fitted with a ratchet clamp at both end of the poly pipe.

For multiple rows a barbed elbow or a barbed tee fitting should be fitted into the poly pipe

All connections should be fitted with a ratchet clamp using multi-grip pliers for either self-irrigation system or manual watering.

### 4. JOINED AND HANG THE THINPOTS

Clip the 2 Thinpots together. The Series 2 Thinpot is designed to be joined in groups of two between the adaptor plugs. There is a male/female on the end of every Thinpot. Simply join the pots by sliding the male channel into the female channel. Once the two pots are joined together, hang on to the poly pipe.

**FOR HAND WATERING, GO TO STEP 8**

### 5. PUNCH HOLES

If you are using an irrigation system then now is the time to punch holes in the poly pipe centrally located in the cut out in the rear of the Thinpots.

### 6. EMITTER

With the holes punched in the poly pipe, hold the pipe firmly in one hand and push the barbed end of the emitter into the hole (often makes a click once inserted)

### 7. PRESSURE REDUCER

If you are using an irrigation system then a pressure reducer must be used unless using a low energy consuming pump.

### 8. FILLING

The Thinpots can now be filled. They must be filled of at least 1/3 with coconut fibre or a similar product and then the rest potting mix (this stop the potting mix falling out, allow for a free flow of surplus water and also to limit the weight in the pots). Once filled insert your chosen plants

### POINTS TO NOTE

- ALL CONNECTIONS MUST HAVE A RATCHET CLAMP
  - THINPOTS MUST BE FILLED WITH A MINIMUM OF 1/3 OF COCONUT FIBRE (SIMILAR PRODUCT)
  - IF USING AN IRRIGATION SYSTEM THEN A PRESSURE REDUCER MUST BE USED
- Note:  
We supply Thinpots and connectors only.  
All others accessories can be purchased from hardware or irrigation suppliers.

**Now its time to enjoy your Vertical Garden!!!**
