## Frequently Asked Questions

### Frequently Asked Questions

- 1) Will your solar pump run at night? **NO**, this model is designed for daylight operation only. It is designed to refill a water storage tank from a low yielding well.
- 2) Do you have solar pump models that will operate 24/7 and at night? **YES**, we offer both battery backup and dual voltage (AC/DC) solar pump systems. These are special order items at this time.
- 3) How is the solar pump controlled when filling a water storage tank? A float switch is included with the solar pump which is installed at the highest point or water shut-off level in the water storage tank.
- 4) What direction and angle should your solar panels be installed? The solar panel should be facing south or in a southerly direction. The angle should be between 15-40 degrees depending on your location.
